

**ALL-LASER LASIK
AND ADVANCED CATARACT SURGERY
AT SEE CLEARLY VISION**

See Clearly Vision continues to be at the forefront of the latest advances in LASIK, cataract & corneal surgery, including IntraLase, customized wavefront guided LASIK surgery treatments, and multifocal & accommodating IOLs for advanced cataract surgery.

All-Laser LASIK

Our centers offer the most advanced technology in LASIK surgery, including Custom LASIK and IntraLase-initiated LASIK, or "All-Laser" LASIK. These methods deliver outstanding visual results for our patients. As always, we perform wavefront testing on all patients, thus using all possible diagnostic tools and the most current technology available today. This testing provides our surgeons with a custom map for your treatment which is as unique as your DNA or your fingerprint.

For those patients who are not candidates for LASIK, we also offer LASEK, PRK, CK, Phakic IOLs, Multifocal & Accommodating IOLs.

Advanced Cataract Surgery

Cataract surgery has evolved tremendously since the days of our parents and grandparents. A cataract is a clouding of the natural lens inside the eye that cannot be prevented. This clouding is caused by the aging process and often causes images to be blurred, colors to be dull and may make night driving difficult. Cataract surgery should be considered as soon as the quality of your vision puts limits on your lifestyle. About half of the population has a cataract by age 65, and nearly everyone over 75 has at least one.

Today, cataract surgery offers different options in the choice of lens implants. Lenses such as ReSTOR, ReZoom and Crystalens are among those designed to provide patients with a full range of vision so they may see objects at far, near, and intermediate distances, often without the need for glasses. One of our doctors would be happy to provide you with detailed information during your examination to help you decide what type of lens is right for you.

Please call 703-827-5454 or 877-234-2020 to schedule a consultation with one of our doctors.
